One-Click Encryption, Decryption, Shredding

Baltsoft Software has released Encrypt Easy v. 3.3, a powerful Windows security application that lets you encrypt and decrypt files, folders, and entire directory trees, with a single click. After encryption, information may be stored on unsecured drives or emailed over the Internet, and only the person with the proper password will have access to the data.

Encrypt Easy lets you choose from the most powerful cryptographic algorithms available, including Rijndael, Blowfish, Twofish, DES, TripleDES, and RC2. To further strengthen cryptographic security, the program uses powerful predictive compression. The combination of encryption and compression ensures that your information remains safe and secure.

Encrypt Easy is fully integrated into Microsoft Windows Explorer, so it is easy and intuitive to use. Simply right-click a file or folder to be encrypted, and with a single mouse-click and a password, the program locks your files securely. One mouse click and the password are all that are required by the person decrypting the files, too. Using the program's self-extracting function, the person decrypting your files need not have Encrypt Easy installed.

The program's shredder makes it easy to remove files or folders from the drive when they are no longer needed. Unlike Windows Explorer's delete function, Encrypt Easy shreds files permanently so that they cannot be recovered. The built-in shredder conforms to the US Department of Defense's 5220.22-M protocol for removing computer files.

Encrypt Easy also has a built-in wipe utility that removes all traces of Internet and system activities. If someone accesses your computer, they will be unable to determine which web sites you have visited, which documents you have recently accessed, or which programs you have been running.

Whether you're a business person who needs to email credit card and other sensitive financial information to colleagues, a business owner who wants to ensure that planning and financial data will never be viewed by competitors, or a home user who needs to communicate privately with other family members, Encrypt Easy has the tools that you need.

Encrypt Easy v. 3.3 runs on Windows 2000/2003/XP/Vista, costs \$29(US) for a single-user license, and may be purchased securely online from <http://www.encrypt-easy.com/> . Site and corporate licenses are available. For more information, or to download the trial version of Encrypt Easy, visit <http://www.encrypt-easy.com/> .

About Baltsoft Software:

Since 1997, Baltsoft Software has been developing and marketing Windows productivity software for business and home users. In addition to Encrypt Easy, the company also offers Convert Center - <http://www.convertcenter.com/> - an online site that lets you make instant conversions from one unit of measurement to another, without cost. Unlike simple conversion programs that let you transform numbers between a few dozen different measurements, Convert Center has hundreds of measurements, from the common to the obscure.

Baltsoft Software also offers Free PDF Converter - <http://www.freepdfconvert.com/> - an affordable online conversion site that lets business people easily convert Microsoft Office documents, images, web pages, and vector graphics files to PDF documents; General Knowledge Base, a versatile freeform database that makes it easy for business people, collectors, hobbyists, and students to manage their information; and MakeSurvey, a powerful interactive survey management system that lets you build, run, and evaluate online surveys. For more information, visit <http://www.baltsoft.com/> .
